

PV+ESS integrated machine

Villages without electricity

Off-grid island

Nomadic farm

Off-grid mine

Product features:

Friendly flexible

- Various working modes can be set flexibly;
- PV controller modular design, easy to expand;

Abundant configuration

- Integrated design, easy to integrate;
- Support simultaneous access of load, battery, power grid, diesel and PV;
- Built-in maintenance bypass switch, improve system availability;

Safe and reliable

- Built-in isolation transformer for high load adaptability;
- Perfect protection function for inverter and battery;
- Redundancy design for important functions;

Intelligent and efficient

- Support battery capacity and discharge time prediction;
- Smooth switching between on and off grid, uninterrupted supply of load;
- Operate with EMS to monitor system status in real time

MPS PV and battery configuration principles:

- Boost mode configuration principle - open voltage at low temperature at the limit of PV installation * number of PV panels in series \leq the lowest voltage of the battery;
- Buck mode configuration principle - the maximum power operating voltage at the extreme high temperature of PV installation \geq the highest voltage of the battery;
- The PV and battery configurations of MPS must comply with the above configuration principles;

* The AC grid port must be connected to a generator only for Australian Market, because the inverters are not certified to AS/NZS 4777.2:2020.

** The number of MPPT can be customized within the range.
